

MATH 633 (HOMEWORK 1)

HIDENORI SHINOHARA

Exercise. (Problem 1)

- TODO
- Let $z \in \overline{A} \setminus A$. z is a limit point of A and $A \subset B$, so z is a limit point of B . Since B is closed, $z \in B$.

Exercise. (Problem 2)

- Not open, not closed, not compact. The boundary is $\{x + iy \mid |x| = |y| = 1\}$.
- Not open. Closed. Compact. The boundary is A .
- Not open. Closed. Not compact. The boundary is the real line.
- Open. Not closed. Not compact. The boundary is $\{0\}$.

Exercise. (Problem 3)

- $f'(z) = -1/z^2$.
- $|z|^2 \cdot (1/z) = \overline{z}$, which is not differentiable anywhere on \mathbb{C} . Since $1/z$ is differentiable everywhere on $z \neq 0$, $|z|^2$ is not differentiable anywhere on $z \neq 0$. Thus $|z|$ is not differentiable anywhere on $z \neq 0$.

$$\lim_{h \rightarrow 0} \frac{f(0+h) - f(0)}{h}$$

does not exist. This is because the limit is 1 with $h_n = 1/n$, but the limit is -1 with $h_n = -1/n$. Therefore, $|z|$ is nowhere differentiable.
